

How to install Prestashop module.

Requirements.

- Prestashop installed
- PHP 7.0 or higher

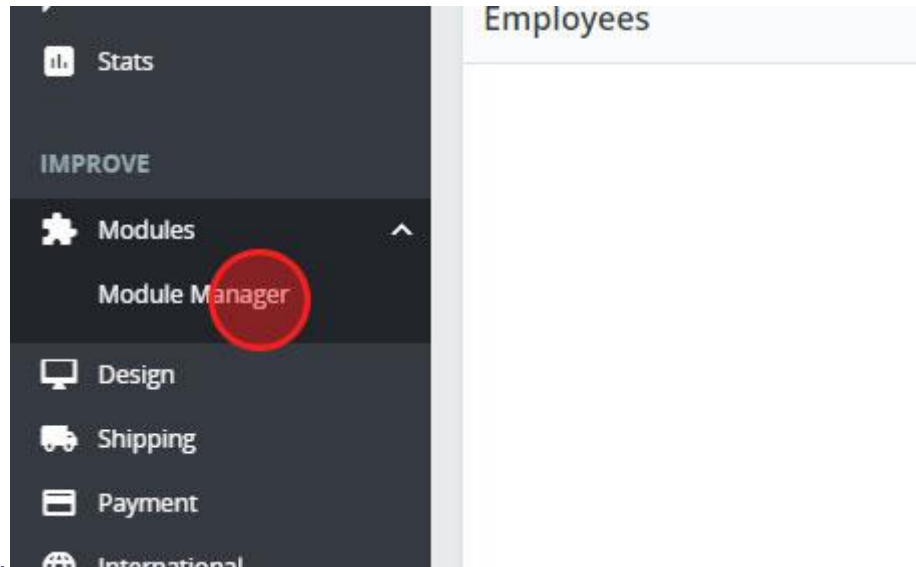

How to install.

1. Download the module: First, you need to download the module you want to install. You can do this from the official PrestaShop Addons Marketplace or from a third-party website.

2. Login to your PrestaShop back office: Go to the backend of your PrestaShop site and login with your admin credentials.

3. Navigate to the "Modules" section: Once connected, click on the "Modules" option in

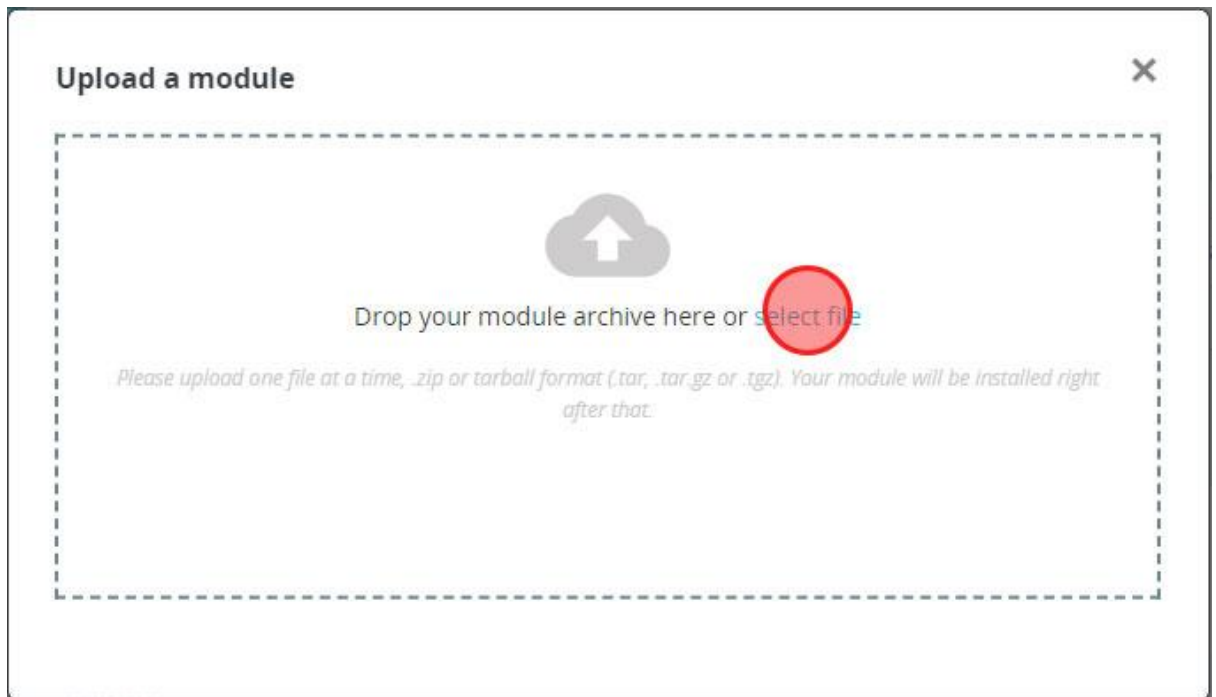

the left menu.

4. Click on the "Download a module" button: This option is located at the top right of the page.

5. Select the module file: Click the "Choose File" button and select the module file you downloaded earlier.

6. Install Module: Once the module is downloaded, you will see an "Configure" button. Click on it to install the module.
7. Configure the module: After the installation is complete, you can access the module settings from the "Modules" section of the backend and configure it according to your needs.
